

Cloud posture

Created: Jul 13, 2026, 11:10 AM

Cloud posture

Last 7 days • Created by: Microsoft • Visible to: Public ⓘ

An operational view that surfaces high-risk areas, key changes, and remediation trends. This enables security teams to prioritize and accelerate response across cloud environments and continuously reduce exposure to strengthen overall security posture.

Overview

Cloud secure score

 New cloud secure score

Cloud secure score now reflects asset risk and business impact, for better accuracy.

Improve score by fixing critical recommendations first.

Defender CSPM plan

All data below is shown only for environments with DCSPM enabled. Get full coverage power by enabling Defender CSPM plan on all your cloud environments.

Defender CSPM enablement on environments

☒ Enabled
 ☐ Not enabled

0 environments have Defender CSPM enabled with limited coverage ⓘ

Security posture

Overview of your security posture, showing secure score trends over time and breakdowns by environment and workload.

Cloud secure score over time

Asset type: All resources

Recommendation category: All resources

Cloud secure score by environment

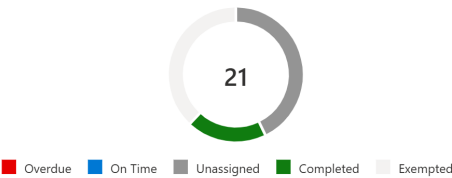

Cloud secure score by workload

Recommendations

Actionable security recommendations and remediation progress to help prioritize risk mitigation efforts.

Cloud remediation status

Cloud security recommendations

Most common cloud recommendations by criticality

Recommendation title	Affected as	Risk level
Resolving XML external entity in user-controlled data	1	
Missing JWT signature check	1	
Query built from user-controlled sources	1	
Failure to use secure cookies	1	
Arbitrary file access during archive extraction ("Zip Slip")	1	
Uncontrolled data used in path expression	1	
Deserialization of user-controlled data	1	
Disabled Spring CSRF protection	1	
Log Injection	1	
Sensitive cookies without the HttpOnly response header set	1	

Regulatory compliance

Displays the current state of regulatory compliance across cloud assets, highlighting gaps and achievements in meeting industry standards and requirements.

Top 5 non-compliant cloud frameworks

Compliance frameworks	Progress
Microsoft cloud security benchmark v2 (Preview)	50%
ASC Default	56.25%
